

Energy Balance in Useful Energy Terms (UEB)

Elaboration of the Energy Balance in Energy Terms Useful for the Industry, Residential, Transport and/or Commercial sectors.

Period of implementation

36 months

Starting: 3/01/2020 Ending: 2/01/2023

Countries Panamá

EU Contribution

€1.429.500

Obiective

Strengthen the technical capacity of the institutions in charge of energy planning in the management of information at the level of efficient energy use, for the development and monitoring of energy efficiency policies and plans.

Beneficiaries

Direct: national institutions formulating energy development policies and plans. **Indirect**: consumer groups that will access information on available technologies and their respective efficiencies for different end-uses.

Map- Project intervention areas

Expected Results

Database of consumptionlevel information in terms of net energy consumption, disaggregated by enduses, technologies and sources used.

Consolidated information on net and useful energy consumption, with energy supply chains processing the useful energy balance.

Strengthened the technical capacities of institutions in charge of energy policy.
