

# Ecuador and Peru: Vulnerability of the Population

Binational project to reduce the vulnerability of the population and its livelihoods to drought and flood hazards in border areas of Ecuador and Peru.

Period of implementation

**43 months**

Start: 11/1/2019 End: 10/8/2022

Countries:

Amount of the grant

**€999,144.00**

Overall project amount

**€1,255,025.86**

### Objectives:

Reduce the vulnerability of the Catamayo-Chira transboundary basin (Ecuador and Peru) by strengthening public institutions for governance in risk management, preparing the border civilian population and improving access to information for hazard prevention with emphasis on droughts and floods.

### Beneficiaries:

Urban-rural population, rural farming communities and public officials.

## Expected results

1. Improved institutional capacity of public entities in the border areas, through training, technical assistance and the development of joint agreements in the management of risk, focusing on drought and flood prevention. This will be achieved through the implementation of a series of activities that will strengthen the institutional capacity of public entities in the border areas, through training, technical assistance and the development of joint agreements in the management of risk, focusing on drought and flood prevention.

2. Strengthened civil society in border communities, by increasing their capacity to manage risk and prevent drought and flood hazards. This will be achieved through the implementation of a series of activities that will strengthen the civil society in border communities, by increasing their capacity to manage risk and prevent drought and flood hazards.

3. Improved access to information for the population in border areas, through the development of a series of activities that will strengthen the civil society in border communities, by increasing their capacity to manage risk and prevent drought and flood hazards. This will be achieved through the implementation of a series of activities that will strengthen the civil society in border communities, by increasing their capacity to manage risk and prevent drought and flood hazards.
