

Pachayatiña/Pachayachay

Information, governance and action for drought risk reduction in Peru and Bolivia in a context of climate change

Period of implementation

35 months
(Start: 15/01/2019 End: 15/12/2021)

Countries:

Bolivia

Peru

Amount of EU grant

€1,499,996

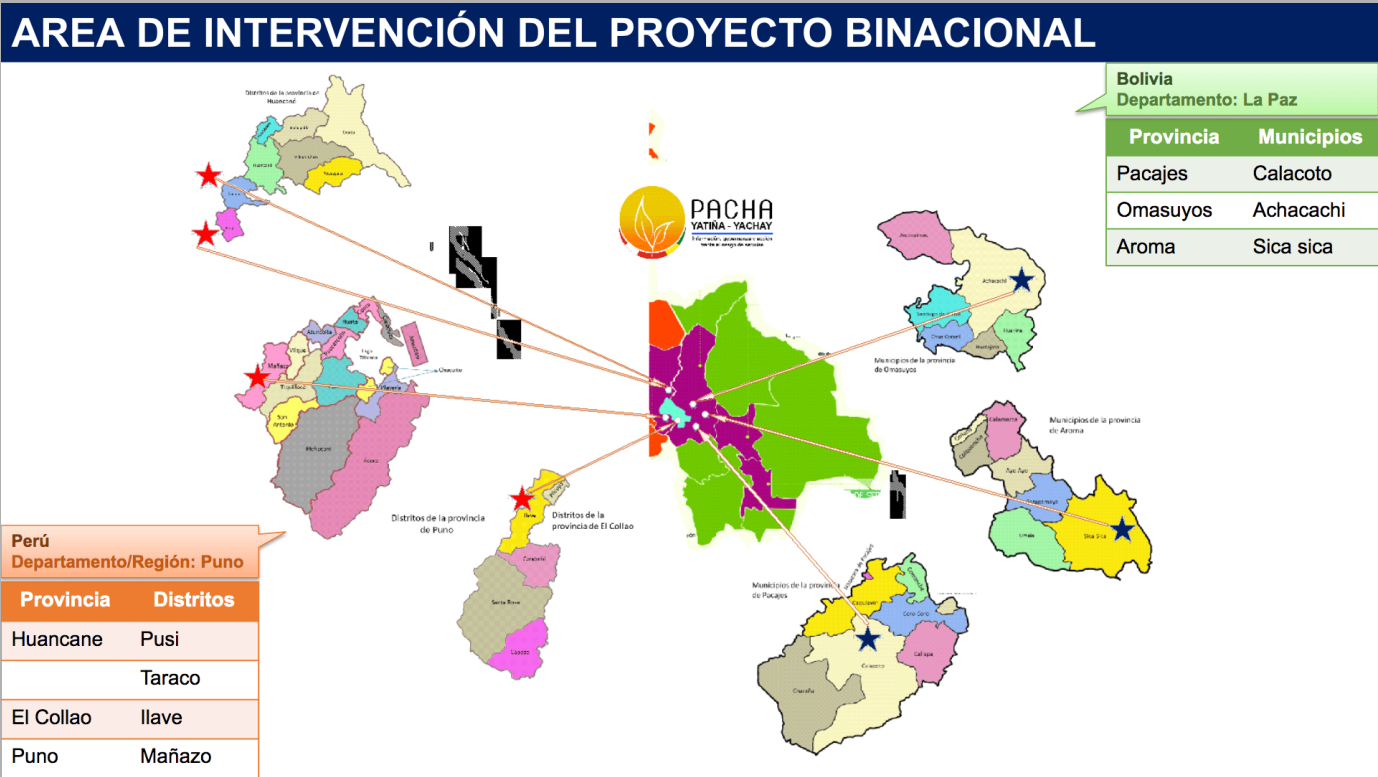

Overall project amount

€1,587,996

Objective:

Contribute to reducing the risk of agricultural losses caused by drought, in a context of climate variability and change in the Bolivian-Peruvian Altiplano.

Map- project intervention area

Expected results

1

-Strengthened national and sub-national capacities for the implementation of climate services for drought risk management, in a context of climate variability and change, in Bolivia and Peru, based on dialogues between the National Hydrometeorological Services and users linked to the agricultural sector.

2

- Governance mechanisms for drought risk management strengthened in Peru and Bolivia.

3

- Experiences with drought risk management in prioritised territories (basins or micro-basins) strengthened in Peru and Bolivia.
